- GUEST 2 & 3 VANITY = 12MM JASPER

WALL FIXING FOR FLOATING CABINETS

Floating floor units have a strong fixing-system for suspended installation. This consists of an upper suspension fixing for taking up the lifting and drag-force, plus a bottom support.

Floating cupboards have to be fixed directly to the wall. Wall spaces have to be padded.

Suitable fixing materials (dowels and screws) for wall suspension have to be determined and supplied on site.

The suspension fixing in the interior of the cupboard is made at the factory.

Installation is to be carried out by an authorized person and only according to these installation instructions or our direction.

It is essential to have sufficient load bearing capacity of the wall for a solid fixing.

Wall fixings are not part of the shipment. They have to be obtained on site.

We draw your attention at this stage to the fixing systems of the Manufacturers HILTI, FISCHER and WÜRTH

It is absolutely essential to have the bearing capacity of the wall and the exact type of fixing to the wall checked by a stress analyst or an appropriately authorized person!

We are not liable for property or personal damage which has been caused through incorrect installation or insufficient structure analysis.

Installation of BOSSA Wall Claddings

BOSSA wall coverings are mounted with the aluminum hanging profile set (WVAUFH). The WVAUFH 'cleat' is 5mm thick.

A minimum of two cleats are required for each panel. Multiple cleats will be needed for panels higher than 50cm. The vertical distance between two suspension cleats must not be greater than 60 cm.

A gap of 1.5 cm from the top of the cleat to the top of the panel is necessary for suspending. An installation gap of 0.5 cm between wall and panel must be anticipated when laying out the panels.

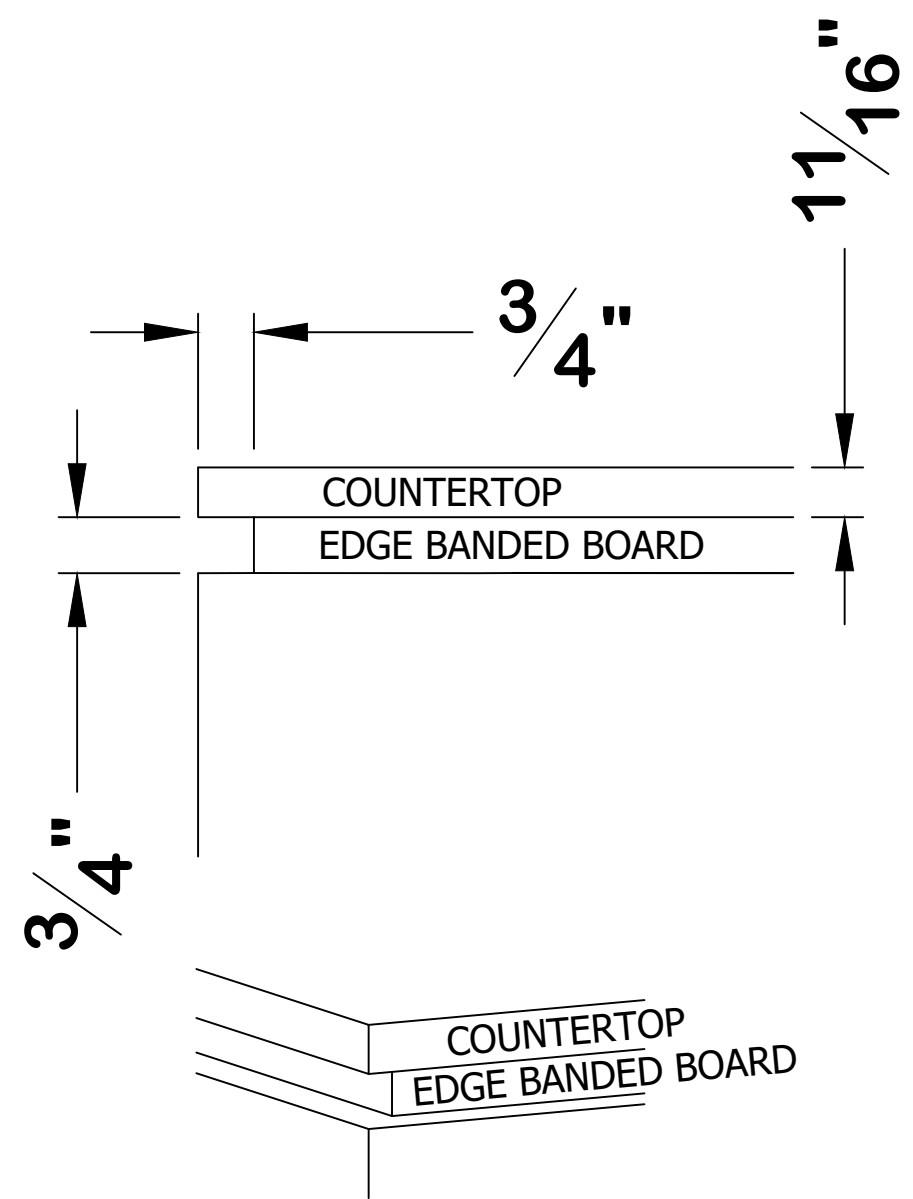

The panels will hang 0.5 cm forward of their supporting wall to accommodate the hanging cleat.

Corner panels will hang 0.5 cm forward of both supporting walls.

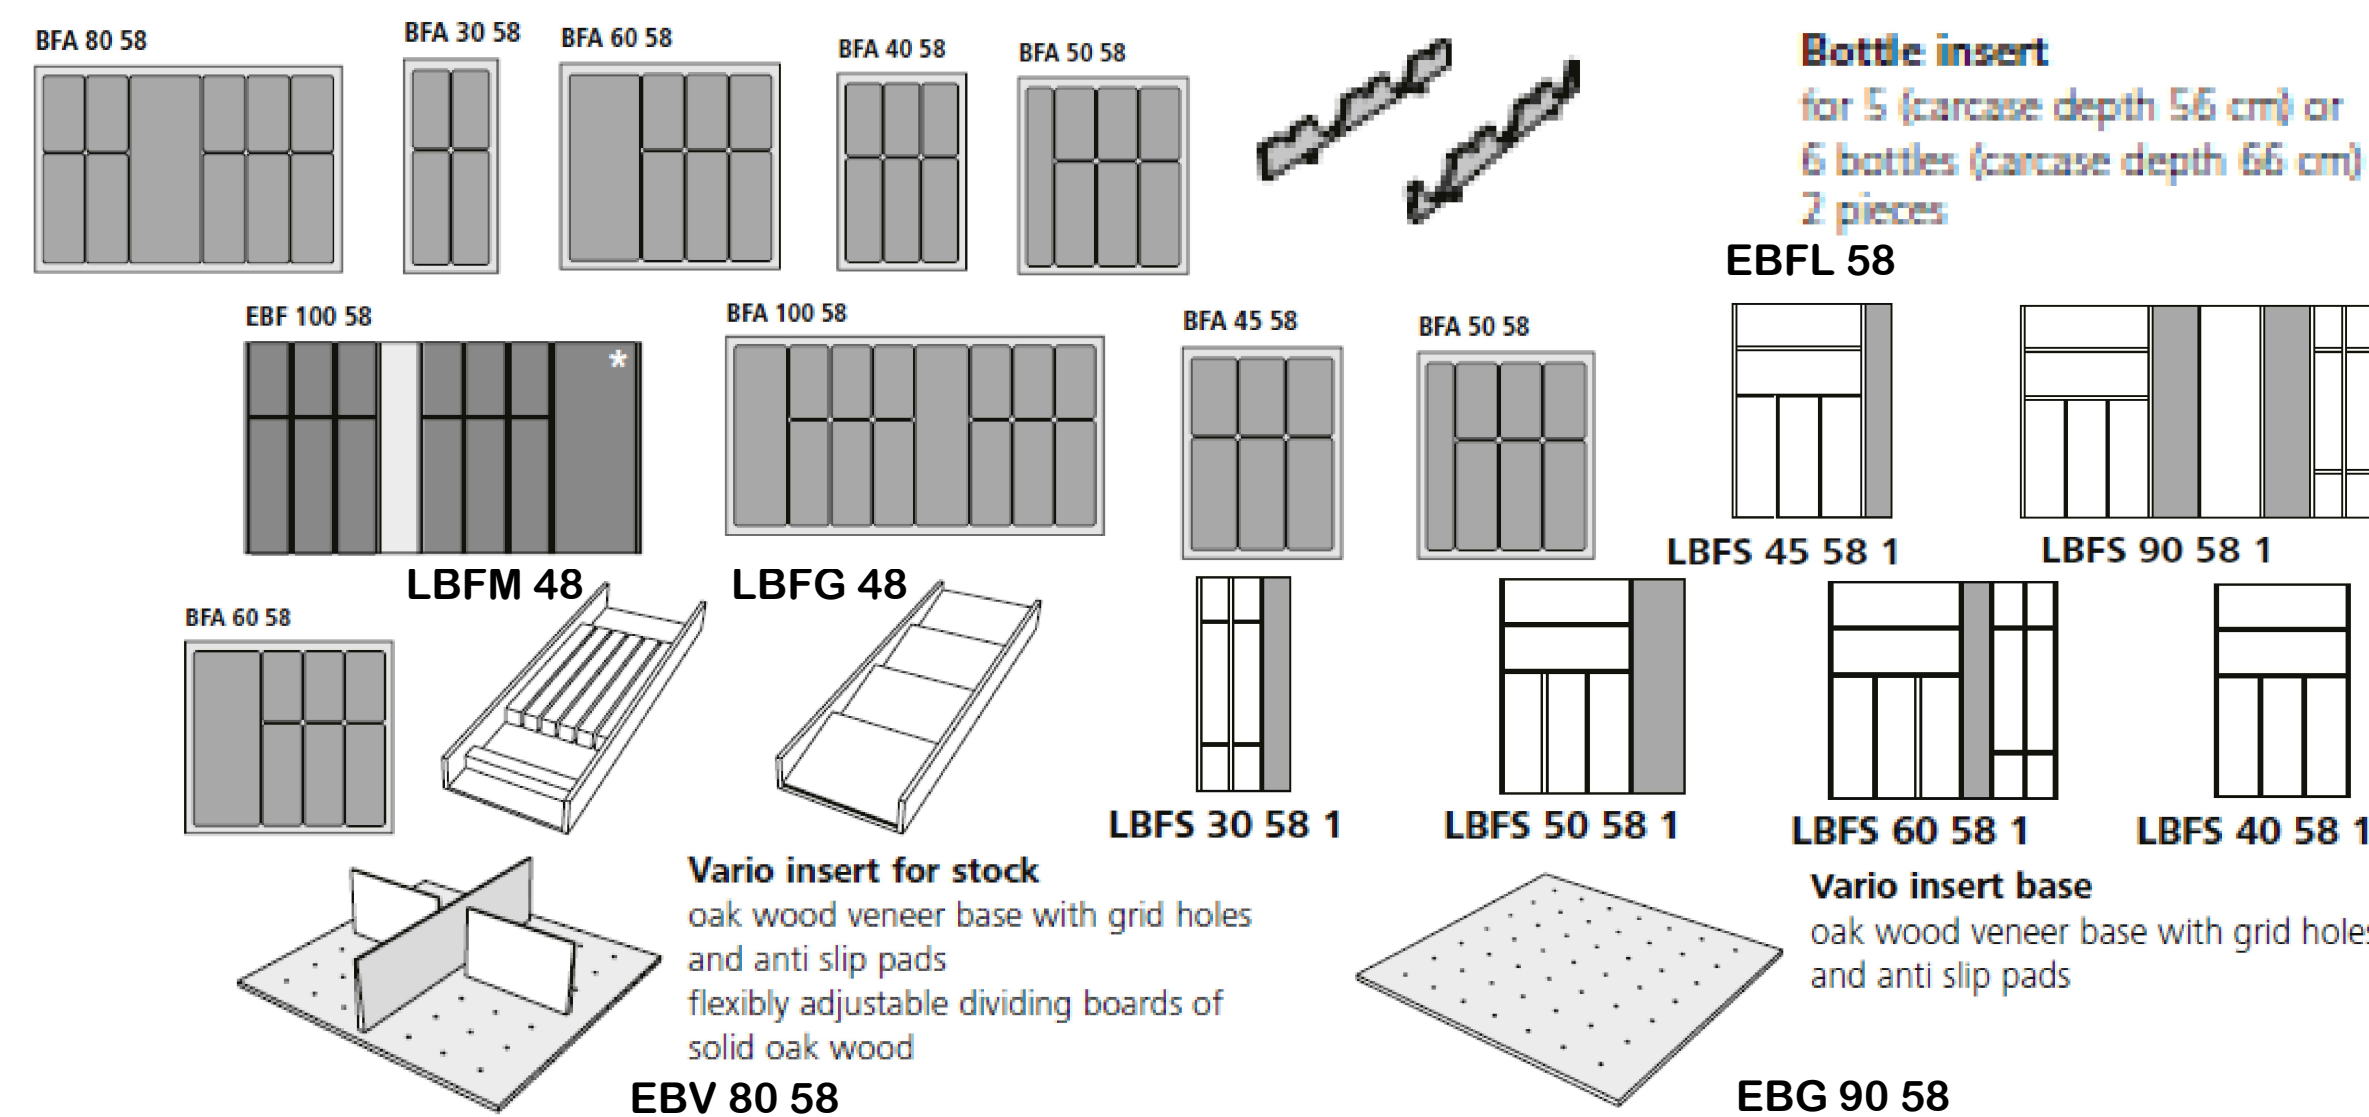

In order to maintain the front grid, the flat panels and corner profiles must be installed with vertical gaps of 0.5 cm.

The 0.5 cm gaps between the panels will reveal the wall behind.

To ensure the BOSSA effect is achieved all supporting walls must be painted with flat black or a color chosen to match the averaged color of the BOSSA panels.

BOSSA | BOSSA-E

Planning tips:

Width alterations

In principle, alterations of front or cupboard heights are also possible with the BOSSA programme, however only in increments of 2.5 cm. The same applies for side panels in front style, but these can only be ordered in increments of 2.5 cm, based on the planning front width.

Island end panels

Island end panels TW 5 from the BOSSA programmes can only be ordered with a grid width of 2.5 cm due to their lined embossing. When planning, please note the total width of the carcass according to the following table.

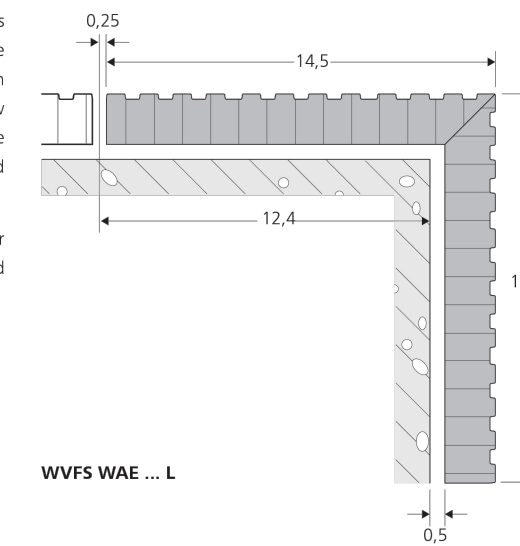

Deep carcasses (cm)	Panel depth (cm)
K	W
90.7	94.9
93.2	97.4
95.7	99.9
94.2	102.4
100.7	104.9
103.2	107.4
105.7	109.9
108.2	112.4
110.7	114.9
113.2	117.4
115.7	119.9 (max)

However, end panels TW 6, at the end of a cupboard run, can be ordered to millimetre depth, as usual.

Niche- and panel wall coverings

Wall claddings with BOSSA-front panels can be ordered via its own niche panel type WVFS W... L for corner wall cladding, the WVFS WAE... L corner element with a 15 x 15 cm leg length is available. BOSSA wall coverings can be mounted with the new panel wall fixing WV AUFH. Please note, when determining the size of the panels, the installation gap of 0.5 cm between wall and panel must be observed.

Please note the maximum niche panel width of 110.5 cm. In order to maintain the front grid, the panels should preferably be installed in front width and with vertical joints of 0.5 cm width.
